Data sheet and list of spare parts for Red Dragon® 3 pump HIGH PRESSURE VERSION

For all Red Dragon® 3 Speedy 150 Watt / 17,0m³ pumps (High Pressure

v2.0

ENG

Data sheet and power curve for pressure pump with adjustable speed motor

Red Dragon® 3 Speedy pump 150 Watt / 17,0m³ Product no.: 605/HP **1.189,32 €**

Technical data Red Dragon® 3 Speedy pump 150 Watt / 17,0m³:

Performance: 17.100 liter / h
Cable length: 0,8 meter (plug controller)
3,0 meter (controller to pump)
pump and controller with a removeable Hirschmann-plug-connection

Pressure side: Ø 40 mm Intake side: Ø 50 mm
Wattage: adjustable max. 150 Watt (min. 20W, in 2 W steps)
Pressure height: max. 6,35 meter
Material/color: PVC black/red/grey with screw connection
Operating voltage: 230 Volt 50 Hz (also in 110V/60Hz available)
Noise level: 39 - 47 db at full speed (measured in 1 m distance - operation external)
Protection class: IP 68 (submersible pump) IP 66 (controller)
Weight: 4,7 kg
Height of intake side: center 70 mm
Dimension pump: ~ 130 mm wide / 290 mm length / 210 mm height
Dimension controller: ~ 190 mm wide / 168 mm length (250 mm with connection cable) / ~ 84 mm height

- ////////////////////////////////////
- Saltwater resistant M6 grade 2 titanium screws
 - Saltwater resistant parabolic rubber feet for acoustic decoupling
 - Extreme low noise brushless dc-delivery pump with grouted power electronics
 - High efficient technology Made in Germany
 - Inlet and Outlet complete with DIN connection, compact dimensions
 - High performance ceramics bearings and hollow shaft for bypass purging in the rotor housing
 - "The only" saltwater resistant pump with titanium rotor, titanium stator and shrivelled bearings
 - Easy usage and maintenance. Low risk of calcification due to polished titanium parts and compulsory purging
 - Heavy and massive craftsmanship against vibrations and oscillation
 - CE conformity, developed and built according to VDE guidelines
- ////////////////////////////////////

The direct control/connection of Aquarium computer possible!

Prepared for connection to an aquarium computer (E.g. GHL) via a 0-10V interface. No additional controller needed. tested so far following these two computers: GHL ProfiLux 3.1 and from Neptune Systems the Apex Aqua Controller.

Functioning of the electronics:

Once a voltage > 0,5V to the 10V interface is, the interface adapter takes over controlling and the system and lock(disable) the buttons on the controller. Voltage will be < 0,5V normal controller operation and the buttons are again released. So can the interface adapter stay connected without performing a function.

If the Aquarium(tank)-computer voltage under 0,5V the 0-10V interface is shut down and the pump can be operated manually. From 0,5V, the interface will take over control of the scheme. In the area of 0,5V-0,8V the pump is switched off. From ~ 0,8V starts the pump at the lowest level (20W) and run. At an increase of steps in 2W up to 9V=150W. So 1V = 20W 9V = 150W. The applied voltage and the resulting performance will be shown in the display.

At a higher input voltage remains the Speedycontroller to the maximum setting are available and no longer increases. The interface adapter behaves as if the corresponding would push the button.
